

FIRE DEPARTMENT

After reviewing the results and the reactions of the field tests of the Abro X2000 fuel additive, I am pleased to inform you that the fuel economy on the Ladder Truck equipped with a Detroit Diesel has dramatically improved. The chauffeurs who are assigned to this vehicle have commented about a noticeable change in the engine smoothness and operation.

There has been a dramatic reduction in visible exhaust from the vehicle. This has improved the air quality in the fire house to the pleasure of the crew, particularly when the vehicle is started up.

The additive was also added to five gas powered Passenger cars. The five cars were all emergency response vehicles; Two chiefs. Two cars assigned to the safety Officer and one tow truck. All the vehicle operators have had the same comments regarding significant power changes and fuel economy.

I am quite happy to say that not only does your product meet our needs but it exceeds many of the projections made by you and your entire staff.

Respectfully,

A handwritten signature in black ink, appearing to read "Thomas A. Catvin".
