To whom it may concern:

My company is a New Jersey State Emissions Test Station and as such I've had the opportunity to test three different vehicles from Global Fuel Technologies for compliance to the NJ State Environmental Protection standards. This was done without any fuel additives and then again with a new fuel additive manufactured by Global Fuel Technologies called Nitro MPG. Please note that all three of these vehicles were very clean and were well below their NJ State Emissions requirements by a large margin before we added the fuel additive and drove them for an additional 30 miles. Three tests were done on each car before and then again after the Nitro MPG was added. The results were 100% repeatable and statistically significant.

1. Test #1 1999 Mercedes C43 - AMG / V8

	W/O	W/ Nitro MPG
HC	37 PPM	9 PPM
CO	0.01 PPM	0.1 PPM
NOx	27 PPM	0.01 PPM

2. Test#2 2004 Maserati / Cabro Spyder

	W/O	W/ Nitro MPG
HC	26 PPM	10 PPM
CO	1.14 PPM	0.01 PPM
NOx	86 PPM	0.0 PPM

3. Test #3 2006 Chevrolet Monte Carlo / V-8

	W/O	W/ Nitro MPG
HC	42 PPM	10 PPM
CO	0.03 PPM	0.1 PPM
NOx	0 PPM	0 PPM

Conclusion:

The fuel additive Nitro MPG, from Global Fuel Technologies, has proven to be an important additive / product that can significantly reduce the combustion gases the EPA measures as harmful to the environment.

Sincerely,

Tony Covino
